STATUS, NOVEMBER 2026

Live today. Labelled honestly.

Two AI features are live today. AION publishes approved content as structured JSON for LLMs and AI agents. Author-it MCP connects Claude to your live library.

Both run on governed, component-level content: single-sourced and versioned, with a publishing gate and a full audit trail.

What is live in Author-it today

1 AION JSON OUTPUT

Live since 2026.R1 on all deployments, at no extra cost. Structured JSON that keeps the hierarchy and metadata.

2 AUTHOR-IT MCP

Author-it Cloud, from 2026.R4. Claude reads and updates topics as the signed-in user, once they approve.

3 PUBLISHING GATE

Unapproved content cannot reach AION output. The gate that controls a printed manual controls what AI reads.

4 PROVENANCE

Every AION chunk carries a stable identifier back to its source component, so answers trace to approved content.

5 VERSIONING AND AUDIT

Object-level version history, reuse across deliverables, and reviews recorded against the content itself.

6 TRANSLATION

60+ languages, with a built-in module, an XML translation kit and automatic locale variants.

Coming, limits and cost

{ }

Coming next

Approval state, version history and reuse relationships in AION output. On the roadmap, not claimed today.

×

What MCP will not do

It cannot delete or publish. It reads drafts you can see, so set approved-only rules in Claude.

✓

Works with Claude

In 2026.R4, the supported assistant for Author-it MCP is Claude. Tell us what you run next.

R4

What it costs

AION: no extra cost. Author-it MCP is included at no extra cost until 2027.R1. Pricing will be confirmed with 2027.R1.
